To whom it may concern,

**E.S. Embedded Solutions 3000 LTD. (E.S.)**  
**Notice regarding hardware configuration update in BNS product line**

Along with global shortages and rising prices of electronic components, we do our best to continue providing our customers with first-class service without price increases, without lengthening delivery times and without compromising on the quality of the product.

After extensive market search along with our current supply chain as well as examining appropriate alternatives from other manufacturers, we are pleased to announce that as of April 3, two updates will apply:

1. The hardware of cBNS will be based on DELL 1U servers.
2. iBNS and mBNS enclosures will be merged into the mBNS enclosure, while the internal HW configuration of the iBNS and the mBNS systems will continue to meet all the requirements and functions required by them.

The above changes should not harm our customers in any way, neither in the price level nor in the lead-time nor in the performance.

In case you have placed your order already and you prefer to receive the old hardware, kindly contact your focal point to understand and validate the alternatives.

We thank all our customers for their trust and loyalty.

Regards,  
Yaron Mintzker
